856 Ship Notice/Manifest

Functional Group=SH

Purpose: This X12 Transaction Set contains the format and establishes the data contents of the Ship Notice/Manifest Transaction Set (856) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to list the contents of a shipment of goods as well as additional information relating to the shipment, such as order information, product description, physical characteristics, type of packaging, marking, carrier information, and configuration of goods within the transportation equipment. The transaction set enables the sender to describe the contents and configuration of a shipment in various levels of detail and provides an ordered flexibility to convey information. The sender of this transaction is the organization responsible for detailing and communicating the contents of a shipment, or shipments, to one or more receivers of the transaction set. The receiver of this transaction set can be any organization having an interest in the contents of a shipment or information about the contents of a shipment.

General Usage:

Advance Ship Notices – As confirmation of shipment and content information for visibility and automation of receiving, trading partners will be required to provide the ASN/Ship Notice details for all electronically created orders sent through SPS. The data will be captured for Trading Partner Intelligence functionality, Online Reporting, as well as forwarded to Retailer using the agreed upon file format. This information will be used as confirmation of shipment and content details in advance of the receipt of the orders. Retailer will support the Pick and Pack ASN Structure and each ASN will represent a single shipment (Ship-To location). Trading Partners will be expected to include all PO's physically in a single Shipment/Trailer/Container within a single ASN data feed. Details on expectations of trading partners are below:

For Store or DC shipments, Trading Partners can send the ASN data in -

- SOTI (Shipment, Order, Tare/Pallet, Item - Primarily used for single SKU Pallets) format. With this format, the Trading Partner is indicating they have provided the GS1 Shipping label at the pallet level and that the ASN data contains that barcode number.*
- SOPi (Shipment, Order, Pack/Carton, Item - used for loose Cartons and pallets containing more than one SKU) format. With this format, the Trading Partner is indicating they have provided the GS1 Shipping label at the Carton level and that the ASN data contains that barcode number.*

Note:

- *For those shipments that are palletized –*

o Retailer requires that all cartons be labeled and the SSCC information be provided at the pack level when the Pallet contains multiple SKU's. Products will be requires to be packed in layers within the pallet by (i.e. 4 SKU on a pallet would be 4 different labels, one per layer/SKU) the SSCC number can be at either the pallet or carton pack levels.

o Retailers supports trading partners packing multiple orders per pallet. Suppliers will be required to pack PO/SKU in layers and each carton labeled and send SOPI ASN structure. (Note: Sally Beauty will not allow mixed order cartons)

For Drop Ship end consumer shipments, Suppliers will be required to:

- *Include a single PO shipped to the end consumer within that single ASN data feed*

Change History:

09/19/2019

-Removed the FOB01 code of 'TP'

-Made the TD502/TD503 required.

Semantics:

1. The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).
2. The implementation convention reference (ST03) is used by the translation routines of the interchange partners to select the appropriate implementation convention to match the transaction set definition. When used, this implementation convention reference takes precedence over the implementation reference specified in the GS08.

Comments:

1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
2. The HL segment defines a top-down/left-right ordered structure.
3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
4. HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Comments:

1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
2. The HL segment defines a top-down/left-right ordered structure.
3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
4. HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

<u>Ref</u>	<u>Id</u>	<u>Element Name</u>	<u>Req</u>	<u>Type</u>	<u>Min/Max</u>	<u>Usage</u>
MAN01	88	Marks and Numbers Qualifier	M	ID	1/2	Must use

Description: Code specifying the application or source of Marks and Numbers (87)

CodeList Summary (Total Codes: 21, Included: 2)

Code Name

CP Carrier-Assigned Package ID Number

User Note 1:

Required for the Carton Tracking #. Must be used for all small package shipments.

Repeating MAN segments should be used for every Carrier Assigned Tracking Number

GM EAN.UCC Serial Shipping Container Code (SSCC) and Application Identifier

User Note 1:

Required for the GS1-128 20 digit bar code number. Must be used for all bulk shipments.

MAN02	87	Marks and Numbers	M	AN	1/48	Must use
-------	----	-------------------	---	----	------	----------

Description: Marks and numbers used to identify a shipment or parts of a shipment

User Note 1:

When MAN01=CP, this is the small package tracking #. The min/max field length is 1/48.

When MAN01=GM, the min/max field length is 20/20

Syntax Rules:

1. P0405 - If either MAN04 or MAN05 is present, then the other is required.
2. C0605 - If MAN06 is present, then MAN05 is required.

Semantics:

1. MAN01/MAN02 and MAN04/MAN05 may be used to identify two different marks and numbers assigned to the same physical container.
2. When both MAN02 and MAN03 are used, MAN02 is the starting number of a sequential range and MAN03 is the ending number of that range.
3. When both MAN05 and MAN06 are used, MAN05 is the starting number of a sequential range, and MAN06 is the ending number of that range.

Comments:

1. When MAN01 contains code "UC" (U.P.C. Shipping Container Code) and MAN05/MAN06 contain a range of ID numbers, MAN03 is not used. The reason for this is that the U.P.C. Shipping Container code is the same on every carton that is represented in the range in MAN05/MAN06.
2. MAN03 and/or MAN06 are only used when sending a range(s) of ID numbers.
3. When both MAN02/MAN03 and MAN05/MAN06 are used to send ranges of ID numbers, the integrity of the

two ID numbers must be maintained.

User Note 1:

If a single item is being shipped in multiple cartons, each tracking number should be sent in a new MAN iteration.
